

Hastings County, including the area covered by Quinte Conservation, **is indeed a wetlands-rich area.**[\[1\]](#)
[\[2\]](#) [\[3\]](#)

According to www.iAsk.AI - Ask AI:

The region's geography and the efforts of various conservation organizations contribute to its significant wetland presence. The Quinte Source Protection Area, which encompasses the watersheds of the Moira, Napanee, and Salmon Rivers, and all of Prince Edward County, covers 5,921 square kilometers in eastern Ontario.[\[1\]](#) The northern parts of these watersheds, particularly where they originate in the Canadian Shield, are characterized by rocky ridges and extensive wetlands.[\[1\]](#) As these rivers flow southward towards the Bay of Quinte, they traverse diverse landscapes, including agricultural lands and areas with historic mills.[\[1\]](#)

Quinte Conservation actively manages and protects several outdoor spaces that feature wetlands. For instance, the H.R. Frink Conservation Area in Plainfield, Ontario, boasts a popular Wetland Ecology Boardwalk, allowing visitors to explore a silver maple swamp and observe a variety of wetland fauna and flora.[\[2\]](#) This area is part of the broader Quinte Conservation efforts to maintain and enhance natural habitats.[\[2\]](#)

Furthermore, the Nature Conservancy of Canada (NCC) has identified the Hastings Wildlife Junction, located south of Bancroft in Hastings County, as a critical area for conservation due to its significant forests and wetlands.[\[3\]](#) This 10,000-hectare project is strategically positioned at the junctions of the Algonquin to Adirondacks and The Land Between corridors, both of which are known for their high biodiversity and important wetland ecosystems.[\[3\]](#) The wetlands within the Hastings Wildlife Junction provide essential ecosystem services, such as carbon storage and floodwater retention, which are crucial for mitigating the impacts of climate change and maintaining water quality in the Lake Ontario watershed and the headwaters of the Bay of Quinte.[\[3\]](#)

Local organizations like the Hastings Prince Edward Land Trust (HPELT) have also played a role in promoting the protection of wetlands, particularly those of the Bay of Quinte, from Belleville to Point Anne.[\[4\]](#) Their work, often in collaboration with partners like Quinte Conservation and the Nature Conservancy of Canada, highlights the recognized importance of these wetland areas for ecological health and biodiversity.[\[4\]](#) The presence of numerous rivers, creeks, and the transition zone between different ecoregions further contributes to the prevalence of wetlands throughout Hastings County and the Quinte Conservation's operational area.[\[1\]](#) [\[3\]](#)
